## Table of contents

- 1 Beehive 1.0 Beta RC1 Binary Distribution.....2
- 2 Beehive 1.0 Alpha Binary Distribution.....2
- 3 Daily Binary Distributions.....2
- 4 Making Your Own Distribution.....2

## 1. Beehive 1.0 Beta RC1 Binary Distribution

The first Beehive 1.0 Beta Release Candidate #1 (RC1) binary distribution is available for download at <http://cvs.apache.org/dist/incubator/beehive/nightlies/v1.0-beta-rc1/bin/>. This distribution is a *candidate* for the beta release and is *not* intended for creating production-level applications. Please try it out and file "v1beta" bugs against it; we are in the final stages of locking down for beta, so this is your last chance to influence what goes into it.

## 2. Beehive 1.0 Alpha Binary Distribution

The Beehive 1.0 Alpha binary distribution is available for download at <http://cvs.apache.org/dist/incubator/beehive/v1.0-alpha/bin/>. This distribution is an *alpha* release and is *not* intended for creating production-level applications.

## 3. Daily Binary Distributions

Beehive doesn't have automated daily drops yet, but we do periodically post manually built drops, available at: <http://cvs.apache.org/dist/incubator/beehive/nightlies/>

## 4. Making Your Own Distribution

If you want the Beehive source, follow the instructions at <http://svn.apache.org/repos/asf/incubator/beehive/trunk/BUILDING.txt>. You will need to install the Subversion source control client (a.k.a. "SVN"), downloadable from <http://subversion.tigris.org/>.

Once you've obtained a copy of the source, you can roll your own distributions using the `build.dist` target and then create archives using the `build.dist.jar` target. (These targets are located in the Ant build file `beehive/trunk/distribution.xml`.)
