1.2 Documentation Table of Contents Display Problems on Internet Explorer.....	2
2 Issues Fixed in this Release.....	2

## **1. Known Issues in this Release**

### **1.1. Some <netui> Tags Do Not Produce Valid HTML or XHTML**

The following <netui> tags do not produce valid html/xhtml because of namespace issues.

**<netui:tree runAtClient="true">**

The runAtClient feature adds several <netui> namespace attributes to the rendered html tags so that tree actions can be correctly processed on the client.

**<netui:html idScope="aValue">**

**<netui:html generateIdScope="true">**

**<netui:scriptContainer idScope="aValue">**

**<netui:scriptContainer generateIdScope="true">**

The idScope attribute (whether user generated or auto generated) adds netui:idScope attributes to the rendered <html> tag, the <div> tag, or both, depending on which of the above tags the idScope attribute is placed.

These items will not validate against HTML-401-Quirks, HTML-401-Loose, or XHTML-10-Transitional.

### **1.2. Documentation Table of Contents Display Problems on Internet Explorer**

On some versions of Internet Explorer (6.0 SP2, and possibly others) the documentation table of contents does not display properly. The table of contents appears further to the right-hand side of the page than is expected.

To fix the display, enable "active content" in Internet Explorer.

This problem is not seen on the Firefox browser.

## **2. Issues Fixed in this Release**
