

# Apache Beehive - Downloads

## Table of contents

1 Beehive 1.0 Beta Binary Distribution.....	2
2 Daily Binary Distributions.....	2
3 Making Your Own Distribution.....	2

## 1. Beehive 1.0 Beta Binary Distribution

The Beehive 1.0 Beta binary distribution is available for download at <http://cvs.apache.org/dist/incubator/beehive/v1.0-beta/bin/>.

**Note:**

This distribution is a *beta* release and is *not* intended for creating production-level applications.

## 2. Daily Binary Distributions

Daily build drops are now available at: <http://cvs.apache.org/dist/incubator/beehive/nightlies/>

## 3. Making Your Own Distribution

If you want the Beehive source, follow the instructions at <http://svn.apache.org/repos/asf/incubator/beehive/trunk/BUILDING.txt>. You will need to install the Subversion source control client (a.k.a. "SVN"), downloadable from <http://subversion.tigris.org/>.

Once you've obtained a copy of the source, you can roll your own distributions using the `build.dist` target and then create archives using the `build.dist.jar` target. (These targets are located in the Ant build file `beehive/trunk/distribution.xml`.)
