

Downloading the Libraries

1. Obtaining the Libraries

Source and binary distributions for both the Java and C++ libraries are available from from the XML project site only. Current distributions are *not* available from the mirrors.

2. Validating Distribution Signatures

All distributions are provided with signature *.sig* files. These contain PGP signatures for the related distribution. You should validate these using the keys found in the key file downloaded from the Apache site.

Verification can be performed using :

```
% pgpk -a KEYS
% pgpv xml-security-bin-1_0_5D2.zip.sig
  or
% pgp -ka KEYS
% pgp xml-security-bin-1_0_5D2.zip.sig
  or
% gpg --import KEYS
% gpg --verify xml-security-bin-1_0_5D2.zip.sig
```

3. CVS Download

For the adventurous, this project's CVS repository can be checked out through anonymous (pserver) CVS with the following instruction set. When prompted for a password for anonymous, simply enter "anoncvs" without quotes:

```
cvs -d :pserver:anoncvs@cvs.apache.org:/home/cvspublic login
password: anoncvs
cvs -d :pserver:anoncvs@cvs.apache.org:/home/cvspublic checkout
xml-security
```
