

jUDDI Mailing Lists

We encourage everyone interested to get involved and contribute. These forums are where the jUDDI developer and user communities meet to discuss issues and plans. Please join us!

Before subscribing to any of the mailing lists, please make sure you have read and understand the mailing list [guidelines](#).

1. jUDDI Users List

Medium Traffic [Subscribe](#) [Unsubscribe](#) [Subscribe Digest](#) [Unsubscribe Digest](#) [Send mail to list](#) [MBOX Archive](#)

The juddi-user@ws.apache.org mailing list is the primary source of support for anyone using jUDDI. Use this list for posting questions (and answers) related to the installation, configuration and use of jUDDI.

Subjects Authors Bodies for list: juddi-dev

3. jUDDI Commit List

Low Traffic [Subscribe](#) [Unsubscribe](#) [Subscribe Digest](#) [Unsubscribe Digest](#) [MBOX Archive](#)

The `juddi-cvs@ws.apache.org` mailing list is for tracking changes to the jUDDI source as they are committed. This list is informational only so please do not post messages to this list. Questions regarding activity on this list should be posted on the [Developer](#) list.

4. Mailing List Guidelines

Every volunteer project obtains its strength from the people involved in it. Mailing lists provide a simple and effective communication mechanism.

You are welcome to join any of our mailing lists (or all of them if you wish). You can choose to lurk, or actively participate. It's up to you.

Before you join these lists, you should make sure that you read and follow the guidelines below.

Do your best to respect the charter of the mailing list

There are three types of lists that you can join:

- The [User](#) list is where you should send questions and comments about configuration, setup, usage and other "user" types of questions.
- The [Developer](#) list is where you should send questions and comments about the actual software source code and general "development" types of questions.
- The [Commit](#) list is used for tracking committer activity in the project's CVS repository. This list is used for informational purposes only. Please do not post messages to this list. Questions regarding activity on this list should be posted on the [Developer](#) list.

Join the lists that are appropriate for your discussion

Please make sure that you are joining the list that is appropriate for the topic or product that you would like to discuss.

Do not abuse resources in order to get help

Asking your configuration or user type of question on the developers list because you think that you will get help more quickly by going directly to the developers instead of to the user base is not very nice. Chances are that doing this will actually prevent people from answering your question because it is clear that you are trying to abuse resources.

Avoid sending HTML or "Stylized" email to the list

Do your best to ensure that you are not sending HTML or "Stylized" email to the list. If you are using Outlook or Outlook Express or Eudora, chances are that you are sending HTML

email by default. There is usually a setting that will allow you to send "Plain Text" email. If you are using Microsoft products to send email, there are several bugs in the software that prevent you from turning off the sending of HTML email.

Watch where you are sending email

The majority of our mailing lists have set the Reply-To to go back to the list. That means that when you Reply to a message, it will go to the list and not to the original author directly. The reason is because it helps facilitate discussion on the list for everyone to benefit from. Be careful of this as sometimes you may intend to reply to a message directly to someone instead of the entire list.

Do not crosspost messages

In other words, pick a mailing list and send your messages to that mailing list only. Do not send your messages to multiple mailing lists. The reason is that people may be subscribed to one list and not to the other. Therefore, some people may only see half of the conversation.
